Enable wins new business in the UK and Abroad...

Since the spring Enable has gained a wide range of exciting and challenging projects for both new and existing clients. New clients include Scope, Sugro, Bestway, GKN, Atkins Global, ESS (Compass Group) and Transnational.

The joint venture between Enable Software and Infomatrix has been very successful and the companies are significantly benefiting from shared resources.

With many new projects under way it promises to be a busy time for Enable and we will continue to keep you informed of the progress.

Please do not hesitate to contact us with any queries. We look forward to hearing from you soon.

Best Wishes

A W Butt

Andrew Butt, Managing Director

Cheltenham College Junior School boasts a total of 250 fee paying pupils and has an enviable reputation for excellence. The school required a secure extranet platform that could be accessed from its web site to allow stakeholders, including parents and pupils, access to appropriate documentation and information.

This information needed to be held in an easily administered document management application with access controlled by a strong permissions module. This would allow each section of the document management system to be

controlled by the appropriate member of staff. The system had to be easy to use and personalised to the needs of the different groups of people who would be using the system, and at the same time be accessible by both PC and Mac users.

Enable Software's Relationship Fusion was the perfect answer.

This customised solution allows organisations of any size to deploy a knowledge management system quickly and easily at a price that provides a speedy return on investment.

BESTWAY

Bestway was established in 1962 and is one of the fastest growing privately held companies. Today, the Bestway Group has a diversified portfolio, with interests in Cash & Carry wholesale, property investments, retail outlets, cement production and more recently banking.

Enable Software has been asked to develop a content managed website for Bestway. This will make website changes a simple task which can be undertaken by Bestway without the need for a web expert. Content authors at Bestway will have the ability to publish their own material as an extension of their job, without having to learn new technical skills.

powering business

Enable makes life easier for TNC's Clients...

The TNC Group was established in 1973 to support and assist all organisations that extend credit to their customers.

Today the Group's network of companies provide a wide range of credit management and finance management services to thousands of clients throughout the UK and Ireland.

Open communication with customers is a key priority for TNC. In the past if clients wanted to view their accounts they had to contact TNC by phone or email. TNC would often respond with hard copy reports and statements in the post.

TNC wanted to significantly improve visibility for their clients, and approached Enable who recommended a web based system so that clients could login any time and from anywhere to get an up-to-date view of their debts.

Enable developed a solution through careful consultation with TNC. The solution allows each TNC client to login to a secure portal within the TNC website to access their account information. TNC are able to upload client specific information and manage access permissions to ensure that clients only see data relevant to them.

The solution has provided TNC with a simple yet highly effective system as well as giving them competitive advantage, helping them to retain clients and secure future business.

TNC plc

"The solution has provided TNC with a simple yet highly effective system as well as giving them competitive advantage, helping them to retain clients and secure future business."

Sugro online
more for your business

Sugro distributes products through its 61 wholesale nation-wide distributor members. The service is supported by 350 field and tele sale personnel and 450 delivery vehicles. The success of the Sugro contract division has spurred the growth and development of the Sugro on-line business-to-business Internet solution.

Enable Software was asked to develop an ecommerce site for the wholesale sector of Sugro. This has allowed independent retailers to place their orders directly with Sugro via their website from anywhere within the UK.

ESS
Support Services Worldwide

ESS (Eurest Support Services) are rolling out the Safety-Exchange across all UK business locations to help track & manage their Health & Safety processes. ESS (part of the Compass Group) is the market leader in the provision of facilities management services including catering, hospitality, domestic and building services, leisure and retail facilities, supply and logistics. The ESS global team will be running a pilot 'Safety-Exchange' across 5 continents with the longer term objectives aimed at introducing a common H&S reporting system across their international business locations.

scope

Scope is a registered charity focused on people with Cerebral Palsy. The main aim of the organisation is to help disabled people achieve equality.

Scope have approximately 300 shops throughout the UK and have recently implemented Enable's Property-Tracker. This web based platform gives Scope the ability to view and efficiently manage property information from a corporate perspective and allows them to access all the property information such as rent and lease details from any user location.

GKN PLC

GKN Autostructures Limited specialise in the design, development and manufacturing of automotive body, chassis systems and structural assemblies.

Enable Software have been engaged to provide an Engineering Requests System to provide macro-level management of all new product introductions and engineering change. The system will utilise Enables New Product Introduction (NPI) Tracker software which is a web-based solution allowing customers to define their own processes and workflows electronically.

"This demonstrates an excellent way of using technology to bring all the people involved in a project together and create long lasting risk awareness" (Judge's Comment)

Sainsbury's win an award with the help of Enable...

Enable Infomatix have worked with Sainsbury's for several years, developing a wide range of bespoke software for the property division.

With the help of Enable Infomatrix, Sainsbury's property division won 'The Most Effective use of Technology' award in the 2004 European Risk Management Awards. The challenge for the property division was to remove reliance on disparate systems and create a consistent platform.

Sainsbury's wanted to use the Internet to enable improved communication, collaboration and knowledge gathering while maintaining transparency across the supply chain.

With the help of Enable Infomatrix Sainsbury's were able to implement management tools to measure KPI's and accident frequency rates which has removed the need for repeated training. The data for accident statistics enables capture of all events at source and removes the need for double handling of data. This allows trend analysis and cause and effect evaluation as well as enabling the creation of a culture of targeted improvement programmes.

The health and safety file is audited online throughout the construction process and the accident frequency rates can be reported in real time or monitored via month by month progress throughout the project.

IOSH 04 Conference

Enable Infomatrix participated in the IOSH 04 conference and exhibition on the 19th and 20th April. It was held in Harrogate at the International Conference Centre and the event attracted over 1500 people from throughout the UK and Internationally, maintaining the event as the premier choice for IOSH professionals.

IOSH 2004 Exhibition provided valuable information for OS&H executives, specialists, and leading companies, consultants and journalists. Our stand generated considerable interest and several confirmed orders from a range of companies and government funded organisations. We also presented a spotlight presentation detailing the development and launch of CHaSPI (see following page) as well as our Safety-Exchange software.

HSE launch CHaSPI based on Info-Exchange platform...

The HSE have launched 'CHaSPI' (Corporate Heath & Safety Performance Index) based on our 'Info-Exchange' technology platform. Enable Infomatrix were commissioned late in 2003 to develop the software for this innovative Health & Safety Commission project. Working closely with safety consultants Greenstreet Berman to fast track programme we developed a web based version of CHaSPI that was launched in February 2004. Interested parties can visit the site via www.chaspi.info-exchange.com for more information or to register and complete the H&S index online. The concept of CHaSPI is undergoing a validation period at present before a planned national launch later this year. In the meantime HSE have plans for an SME version and software development work is due to commence in August.

Wafi City takes on the Enable Infomatrix Property-Tracker...

environment enables Wafi to efficiently track all of their retail, office and residential units of which there are over 500.

The software was configured to match Wafi's property portfolio and enables them to maintain all associated key property contact details.

Property-Tracker allows Wafi to upload and archive all associated documentation such as surveys, planning decisions, sketches and photographs. External parties can be given restricted access to view or maintain specific information on a property by property basis which reduces time, cost and administration.

Enable Infomatrix delivered a hosted solution to help reduce costs and speed deployment, both of which are essential in today's competitive business environment.

Wafi City is one of the finest shopping malls in the Middle East. The complex is owned by MKM Commercial Holdings; a property management company. Wafi City is based in Dubai and is described as a city within a city. You will find spectacular shops, restaurants and cafes, an extensive leisure club and stunning apartments with rooftop gardens.

Enable Infomatrix were approached by Wafi Mall with a requirement to maintain, track and manage information relating to each of the their property assets.

Property-Tracker is a web based platform that does exactly this. The secure, configurable
